Notifications / list chooser

GUI

Not possible in Linux headless installation.

Notification

```
zenity --notification \  
  --window-icon="info" \  
  --text="Blub Blub"
```

List selection

```
zenity --list --radiolist --height=275 --width=400 \  
  --title="HP OMEN Profile selection" \  
    --column="" --column="Profile" --column="Description"\  
    FALSE "cool" "Cool Power Profile" \  
  TRUE "balanced" "Balanced Power Profile" \  
  FALSE "performance" "Performance Power Profile"
```

To get the result of this selection just do it like this: `VARNAME=$(zenity --list --radiolist --height=275 --width=400 --title="HP OMEN Profile selection" --column="" --column="Profile" --column="Description" FALSE "cool" "Cool Power Profile" FALSE "cool" "Cool Power Profile" TRUE "balanced" "Balanced Power Profile" FALSE "performance" "Performance Power Profile")`

Headless

Notification

```
whiptail --title "Title Blub" --msgbox "Text blub blub blub" 8 78
```

List selection

```
whiptail --title "Title Blub" --fb --menu "Select option" 11 50 3 \  
  "option1" "Option text 1" \  
  "option2" "Option text 2" \  
  "option3" "Option text 3"
```

```
□"option2" "Option text 2" \
```

```
□"option3" "Option text 3"
```

To get the result of any of these just start do it like this

```
VARNAME=$(whiptail --title "HP OMEN  
Profile selection" --fb --menu "Select option" 11 50 "cool" "Cool Power Profile" "balanced"  
"Balanced Power Profile" "performance" "Performance Power Profile" 3>&1 1>&2 2>&3)
```
